Education

VIT Bhopal University

Aug 2022 – Present

B.Tech, Computer Science and Engineering (Core) – CGPA: 8.37

Skills

Languages: Java, Dart, SQL

Frameworks: Spring, Spring Boot, Spring Cloud Gateway, Flutter, BLoC

Databases & Caching: PostgreSQL, MySQL, Redis

Messaging & Distributed Systems: Apache Kafka, Microservices, Saga Pattern, Resilience4j

Tools & APIs: Docker, Git, GitHub, Postman, OpenFeign, REST APIs, OAuth2, JWT

Projects

Rydfy – Real-Time Ride-Sharing Platform

GitHub

- Architected a 6-service microservices platform (API Gateway, Auth, User, Ride, Location, Matching), implementing centralized JWT authentication and routing 27 REST endpoints through Spring Cloud Gateway.
- Engineered an event-driven ride-matching pipeline with Kafka, using 3-partition topics and a weighted scoring algorithm (70% proximity, 30% driver rating) to achieve 25ms matching latency in simulated workloads.
- Implemented real-time driver discovery using Redis GEO, supporting 10km-radius geospatial queries in <10ms across 500 simulated drivers.
- Built fault-tolerant inter-service communication with OpenFeign and Resilience4j, combining circuit breakers (50% failure threshold, 30s recovery) and retry policies to limit cascading failures during downstream outages.

Tech Stack: Java, Spring Boot, Kafka, Redis, PostgreSQL, Docker, Resilience4j

Distributed Banking System

GitHub

- Designed a database-per-service architecture across 3 isolated PostgreSQL instances, connected via 9 async Kafka event topics for inter-service communication.
- Implemented the Saga pattern for distributed money transfers, orchestrating multi-step transactions with automated compensating rollbacks (refund + account block) to maintain consistency without 2PC.
- Built a real-time fraud detection engine with 3-layer analysis (velocity tracking, amount anomaly via running averages, balance-drain threshold) triggering step-up OTP verification for suspicious transactions.
- Integrated Razorpay payment gateway with webhook-driven async processing and idempotent event handling for payment capture/failure.
- Applied optimistic locking (`@Version`) and `@Transactional` boundaries to prevent lost updates on concurrent balance operations across isolated databases.

Tech Stack: Java, Spring Boot, Kafka, PostgreSQL, Redis, Razorpay

Experience

Flutter App Developer Intern

Feb 2025 – Apr 2025

RGS Grocery

Remote

- Led a 3-member team in the end-to-end development of a grocery mobile app, coordinating UI implementation and API integration with the backend team.
- Consumed paginated, throttled search APIs from a Node.js/MongoDB backend, integrating them into the Flutter app to achieve 30% faster perceived data retrieval.
- Connected the Flutter frontend to RESTful APIs and introduced BLoC state management, cutting redundant API calls by 50%.
- Integrated Google Maps API for location-based search and delivered 10+ pixel-perfect responsive screens from Figma designs.

Tech Stack: Flutter, Dart, RESTful APIs, BLoC, Google Maps API, Git, Postman

Achievements

- **IIITM Hacksagon '25 Finalist** – Selected as a finalist among 600+ participating teams for developing a smart home automation system with advanced IoT integration.
- **Smart India Hackathon (SIH) '24** – Cleared all internal rounds, advancing to the top 25 teams from a pool of 300+.

Certifications

- **Flutter & Dart – The Complete Guide**
- **Java Spring Framework, Spring Boot, Spring AI – Gen AI**

June 2024

September 2025
